ABSTRACT OF THE DISCLOSURE

In order to output event content of a related match during execution of a main match, there is provided a virtual start time decider for deciding virtual start times for a plurality of matches, a related match selector for selecting, from the plurality of matches, at least one match, taking place at least partially at the same time as a main match a player's team is taking part in, as one or more matches related to the main match based on virtual start times for each match, a related match simulator for simulating the related matches, event storage unit for storing event time and event content for prescribed types of events occurring in the related matches, a main match executor for executing the main match, an event time arrival monitor for monitoring for arrival of the event time stored by the event storage unit during execution of the main match, and an event content output unit for outputting event content corresponding to the event time when it is determined that the event time has arrived during execution of the main match.
